Treatment Plant

BMP 202: SWPPP Preparer

Training Course

This SWPPP Preparer Training Program is a one day training program designed for industry professionals preparing the initial Storm Water Pollution Prevention Plan (SWPPP) for a permitted construction site.

The development of a SWPPP requires a carefully planned approach to ensure the practices match with the phases of the construction activity, site conditions and nature of the construction activity.

This program provides information and techniques to allow participants to prepare a compliant and effective SWPPP, so the on-site personnel can properly implement it in the field.

In this session, you will learn the key items evaluated by MT-DEQ inspectors during the SWPPP review portion of the regulatory compliance inspection.

The class is hosted by **City of Kalispell** with the training delivered by a **MT-DEQ** compliance inspector and an instructor from **Altitude Training Associates**.

Goals of the Class

- Learn about MT DEQ's storm water program and regulatory program
- Describe the Montana construction storm water permit requirements relating to the SWPPP
- Learn the format of the SWPPP
- Evaluate site conditions and activities for the appropriate design of Best Management Practices (BMP) to manage pollutants during construction activities.
- Describe BMP(s) used for materials management during construction activities

PREREQUISITE:

Successful completion of the BMP 101: Storm Water Management during Construction course. Please attach a certificate showing the student's successful completion of BMP 101 with this completed registration form, or the date of upcoming training which will be completed prior to this class.
